

New Research in Meniere's disease!

We are looking for individuals with Meniere's disease to develop a new virtual reality rehabilitation tool!

Inclusion criteria:

- Diagnosed with active Meniere's disease
- Under 60 years old
- No ototoxic therapies

The study involves experiencing different environments such as a supermarket or bridge in a virtual reality headset whilst we capture your movements and gather your feedback

Requires 3 hours of your time and you will be compensated £50 and for travel to and from the laboratory

If you are interested in participating please contact Dr Matt Smith at M.Smith16@exeter.ac.uk
